

- 1 User looks at the pink apple and says
“Pick up this apple.” Gaze binds the instance.

- 2 Robot navigates to the bound instance
using the shared 3DGS map (2.3 m away).

- 3 Robot grasps the apple; the object hint
from the map disambiguates it on the table.

- 4 User looks at the box and says “Put it here.”
Robot places the apple into the box.
